The students expressed a need for an organized approach to cope with the volume of basic science curricular material presented during the first two years. Therefore, our review book was not designed to provide a comprehensive text on pharmacology, but rather to provide the students with a significant core of information, as a refresher, after they had successfully completed a basic course in pharmacology. This book represents a major revision of our review of medical pharmacology. The book has been reorganized, updated and expanded to provide current information on major new drugs and information on older drug groups that typically are covered on licensure examinations. The book also has been expanded to include a large number of new questions for self-examination. The faculty have endeavored to retain a reasonably concise, relevant and readable review book that will provide the students with a thorough review of pharmacology. Students are advised to refer to comprehensive textbooks, as needed, to fill in any gaps in their knowledge which may be disclosed by the self-examinations. Text and Essentials of Surgical Specialties, Second Edition Package Written by students, for students, Instant Pharmacology represents a novel approach to the study of pharmacology and provides an accessible and exhaustive, yet concise account of pharmacology. The book first introduces readers to the basic principles of pharmacodynamics and pharmacokinetics, which are obviously essential for understanding the action of all drugs, and it is subsequently divided into four parts. * Part One covers the main chemical transmitters which mediate all bodily processes and are the site of much pharmacological intervention. * A systematic account of the pharmacological treatment of major clinical conditions is presented in Part Two, where emphasis is placed primarily on the principles upon which therapy is based, rather than overshadowing these principles with detailed features of individual drugs. * Part Three comprises a Dictionary of Drugs, alphabetically listing all the drugs encountered in Parts One and Two. Entries in the dictionary describe in detail the clinical uses, mechanisms of action, pharmacokinetics and the main adverse effects of a specific agent. * Finally, to allow readers to evaluate their own progress in the subject, Part Four is a self assessment section, including multiple choice questions (with answers) covering all the topics in Instant Pharmacology. Instant Pharmacology will make the study of pharmacology a more rewarding and enjoyable process, and is essential reading for all undergraduate students of pharmacology, pharmacy and related courses, as well as preclinical medical and dental students.
