KEY FEATURES

- Some new cases have been added, and various case studies from the earlier edition have been updated
- New pedagogical elements, such as Objective-type Questions,

True/False Questions, Review Questions and Assignments have been added in chapters • Glossary has also been incorporated to get a quick understanding of the terms used in the book • Instructor support has been added on the web through Online Resources This volume discusses the key concepts, procedures, and applications required to structure and manage a financial information system. The work is written in non-technical language and covers the full spectrum of information system design from organization of input data to the output required for management. This volume carries the proceedings of the 15th International Conference on Information Systems Development (ISD). ISD progresses rapidly, continually creating new challenges. Progress in ISD comes from research as well as from practice. The aim of the Conference is to provide an international forum for the exchange of ideas and experiences between academia and industry, and to stimulate exploration of new solutions. This volume contains the papers presented at the third biennial Information Systems Foundations ('Theory, Representation and Reality;') Workshop, held at The Australian National University in Canberra from 27-28 September 2006. The

focus of the workshop was, as for the others in the series, the foundations of Information Systems as an academic discipline. The particular emphasis was, as in past workshops, the adequacy and completeness of theoretical underpinnings and the research methods employed. At the same time the practical nature of the applications and phenomena with which the discipline deals were kept firmly in view. Accordingly, the papers in this volume range from the unashamedly theoretical in their focus (Designing for Mutability in Information Systems Artifacts; Towards a Unified Theory of Fit: Task, Technology and Individual) to the much more practically oriented (An Action-Centred Approach to Conceptualising Information Support for Routine Work). The Project Records Information System (PRIS) is an interactive system developed for the Information Management Services (IMS) of Martin Marietta Energy Systems, Inc., to perform indexing, maintenance, and retrieval of information about Engineering project record documents for which they are responsible. This PRIS User's Manual provides instruction on the use of this system. Section 2.0 of this manual presents an overview of PRIS,

describing the system's purpose; the data that it handles; functions it performs; hardware, software, and access; and help and error functions. Section 3.0 describes the interactive menu-driven operation of PRIS. Appendixes A, B, and C contain help screens, report descriptions, and the data dictionary, respectively.
